Glasgow G1 3AE (GB)

(54) Keyless entry system for vehicles in particular

(57) A wireless remote-control transmitter (30) includes means (40) for entering an identification code so that only an authorized operator can use the device. Use as a keyless entry system provides the owner of the vehicle equipped with a wireless receiver (20) with an additional keypad-operated transmitter which may be vehicle mounted to perform some or all of the same functions as those available through an existing remote. In this embodiment, the keypad may be mounted behind a small section of the vehicle's window glass, with command inputs being sensed using electrical, magnetic, or optical detection

techniques. To save on battery power, the system automatically powers down during periods of non-use, with some form of wake-up signal being used to enter operational modes requiring increased power consumption.

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 99 30 2904

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
 The members are as contained in the European Patent Office EDP file on
 The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
